Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 17-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamamoto et al. (Yamamoto) (U.S. Patent No. 6,407,786).

As to claim 17: Yamamoto discloses a transmission/reflection combination type LCD (Figs. 16 and 22) (col. 15, lines 45-46), comprising a capacitor line (56) formed on a substrate (Fig. 10), an insulating layer (43) (see col. 13, lines 35-37), a capacitor electrode (47a in Fig. 22), a contact hole (53), a passivation layer (52) on the capacitor electrode (47a), a transparent pixel electrode (47) (col. 13, line 51) and a reflective pixel electrode (54) (col. 14, lines 55-58). (Note: the numbering of various elements is same and is described at various locations in the specification as well as in several figures encompassing various embodiments. However, the embodiment for the transmissive-reflective liquid crystal display is shown in Figs. 16-22 having the same numbering for various elements).

Art Unit: 2871

As to claims 18 and 19: Yamamoto discloses gate electrodes (42a) and also teaches that a metal thin film made of Al, Mo, Ta or the like is patterned to formed gate electrodes (42a) and the capacitor lines (56) simultaneously (col. 13, lines 27-35), hence they both are formed of the same material.
